INDUSTRIAL COUPLINGS

AUGEMENTED REALITY APP

NEXT LEVEL INFORMATION DISCOVER THE FUTURE TODAY

The R+W app blurs the borders between the real and virtual worlds. Thanks to Augmented Reality technology, you can experience the R+W product portfolio like never before

Every product image in our catalog shown with this icon contains additional information. With your smartphone or tablet, you unlock all of this in virtual reality.

JUST A FEW STEPS TO AUGMENTED REALITY

1. Download the free R+W App from the App Store or Google Play. It is available for all devices with iOS version 7.0 or higher, as well as Android devices with version 4.1 or higher.
2. Wherever you see an image with the Augmented Reality icon  in the catalog, you can use the Augmented Reality app to learn more about product.
3. The app will recognize the image and display the AR content. To enter the virtual world, simply hold your mobile device 20-30 cm above the brochure and move it slightly. 3D models, animations, videos, and other information are waiting to be discovered.

Download the R+W AR App free from the App Store or Google Play now.

NEXT LEVEL COMMUNICATION

SOCIALIZING WITH R+W

Would you like to learn more about R+W and our couplings? We are pleased to take you into the world of R+W. On our YouTube channel, you can find several videos pertaining to our product line.

Are you more interested in application examples for our couplings? If so, please take a look at our case studies that can be found on our homepage. Here you can also subscribe to the R+W newsletter or find a link to download the R+W App.

And if you simply cannot get enough of us, you can find us on Facebook, Google+, and Twitter.

WHO WE ARE.

ABOVE ALL R+W IS: THE PERFECT COUPLING

When R+W Antriebselemente GmbH was first established in 1990 in Klingenberg, Germany, there were three people on board. The head office is still there, but we are now more than 220 people, with subsidiaries in the USA, China, Italy, Singapore, France and Slovakia, and are partnered with over 60 well established distributors in more than 50 countries throughout the world. Many developments have led to this success, but most importantly it was brought about by our endless search for the best possible coupling solutions as well as the high esteem in which we hold all of our customers.

WE PROVIDE INSPIRED SOLUTIONS BACKED BY SOUND PLANNING AND DESIGN.

R+W stands for expertise in the development of solutions for precise torque transmission. The focus of our development is on innovative coupling systems for all sectors of precision drive technology. As a leading manufacturer of precision couplings and line shafts, we strive to maintain a permanent status of technology leadership in our field. Our central claim: R+W couplings ensure precision for process reliability and efficiency, and to that end we seek perfection.

Optimized for technology and business, our product portfolio includes:

- ▶ **Bellows couplings**
- ▶ **Metallic couplings**
- ▶ **Elastic couplings**
- ▶ **Ball-detent safety couplings**
- ▶ **Drive shafts**
- ▶ **Development of customized solutions with collaboration from start to finish, including:**
 - Consultation
 - Conception
 - Engineering analysis
 - Prototyping
 - Manufacturing

TO THE TOP OF THE WORLD WITH TONS OF DRIVE

Our guiding principle, DRIVE, is a mutual calling that unifies our 220 employees: To manufacture top-notch, high-performance couplings and torque limiters for the global market; precise to the micrometer.

With DRIVE, we present ourselves as a Dynamic, Reliable, Innovative and Versatile market and technology leader that strives for Expansion by making further development and improvement part of our everyday business.

DRIVE MEANS

DYNAMIC

Dynamics fascinate us. For our team “dynamic” means outstanding expertise in all matters involving torque transmission and ideal collaboration for the acquisition and application of company knowledge. We work shoulder to shoulder with our customers on a dynamic course toward performance and corporate excellence!

RELIABLE

Our course is set for the future! R+W makes state of the art, zero backlash, wear free coupling systems for the leading industries in drive technology. In addition, we manufacture pioneering special solutions produced with absolute precision. Our reliable products are a sound investment in the efficiency and dependability of your systems and machines.

INNOVATIVE

We understand that adaptability is one of the most significant strengths of our company. A creative work environment based on the spirit of innovation does not happen by accident; instead it is the result of consistent effort.

In order to remain at the heart of technology development, we network tightly with the elite industry leaders and collaborate intensively with universities and technical colleges. This has led to the creation of a prolific research & development department in which we have been able to prototype and test our own inventions.

VERSATILE

Versatility at R+W begins with leveraging the creativity, skills and capacities of our employees. With a broad foundation and a solution oriented mindset, we work in accordance with customer requirements and respond quickly to changes. For this very reason we are also the perfect partner for designing, engineering, and manufacturing unique and special couplings. We are particularly proud of the high level of diversification of our products and of our dedication to continuous improvement.

EXPANDING

Expansion is a critical objective for the future of our company. Most importantly for us this means maintaining genuine industry contacts in a continuously growing global network of expertise. Our customers benefit from our broad based proximity to the market and from strong collaboration with our partners. This allows us to stay focused on our customers’ most up to date requirements, keeping us flexible and able to respond to inquiries with the right solution!

OTHER R+W COUPLINGS

Aside from the products detailed in this catalog, we also offer high quality shaft couplings and torque limiters for servo motion control and other small to midsize precision applications.

More information on these can be found in our PRECISION COUPLINGS guide book.

APPLICATIONS AND DESIGN FEATURES INDUSTRIAL DRIVE COUPLINGS

SIZING AND SELECTION

P. 9

INSTALLATION AND HANDLING

P. 31

TORQSET® SAFETY COUPLINGS

ST

P. 41

from **200 – 250,000 Nm**

AREAS OF APPLICATION

- ▶ timber processing machinery
- ▶ bulk material handling systems
- ▶ tunnel boring machinery
- ▶ industrial shredders
- ▶ rotary test stands
- ▶ extruder drives
- ▶ wastewater scraper drives
- ▶ wherever potential for torque overload exists

FEATURES

- ▶ compact, simple design
- ▶ precise overload protection
- ▶ adjustable disengagement torque
- ▶ robust
- ▶ full disengagement up on overload

HIGH STRENGTH DISC PACK COUPLINGS

LP

P. 65

from **350 – 24,000 Nm**

AREAS OF APPLICATION

- ▶ API 610 pump packages
- ▶ paper machinery
- ▶ steel mill equipment
- ▶ test stands
- ▶ generators
- ▶ bulk material handling systems
- ▶ centrifuges
- ▶ cooling tower drives
- ▶ compressors
- ▶ printing machinery
- ▶ for infinite life in extreme conditions

FEATURES

- ▶ maintenance free for infinite life
- ▶ frictional clamping of disc packs
- ▶ high speeds with extended DBSE
- ▶ zero backlash
- ▶ high torsional stiffness
- ▶ low restoring forces from misalignment

FLEXIBLE GEAR COUPLINGS

BZ

P. 79

from **1,900 – 2,080,000 Nm**

AREAS OF APPLICATION

- ▶ mixers
- ▶ rolling mills
- ▶ conveyors
- ▶ crushers
- ▶ shredders
- ▶ levelers
- ▶ wherever high torque and low cost meet

FEATURES

- ▶ very compact design
- ▶ corrosion resistant
- ▶ large misalignment compensation
- ▶ reduced wear design
- ▶ low maintenance

TORSIONALLY STIFF BELLOWS COUPLINGS

BX

P. 89

from **10,000 – 100,000 Nm**

AREAS OF APPLICATION

- ▶ test stands
- ▶ centrifuges
- ▶ wind energy
- ▶ machine tools
- ▶ printing machinery
- ▶ wherever precise transmission is required

FEATURES

- ▶ robust construction
- ▶ high torsional stiffness
- ▶ fatigue resistant for infinite life
- ▶ easy to mount and dismount
- ▶ precise rotational transmission
- ▶ minimal restoring loads under misalignment

BACKLASH FREE SERVOMAX® ELASTIC JAW COUPLINGS

EK
EZ

P. 95

from **1,950 – 25,000 Nm**

AREAS OF APPLICATION

- ▶ pump systems
- ▶ conveyors
- ▶ material handling systems
- ▶ extruder drives
- ▶ crushers
- ▶ shredders
- ▶ wherever shock, vibration, and misalignment need to be absorbed

FEATURES

- ▶ vibration damping
- ▶ electrically isolating (standard version)
- ▶ misalignment compensation
- ▶ backlash free
- ▶ maintenance free

FOR USE IN HAZARDOUS ENVIRONMENTS

ATEX

P. 103

AREAS OF APPLICATION

for safer operation in industries with explosive atmospheres, such as:

- ▶ oil & gas extraction
- ▶ petrochemical processing
- ▶ munitions manufacturing
- ▶ bulk and powder processing
- ▶ paint systems

FEATURES

For hazardous zones 1/21 and 2/22 these couplings are authorized under directive 94/9/EG.

- ▶ Safety couplings
- ▶ Bellows couplings
- ▶ Elastic jaw couplings
- ▶ Disc pack couplings

SIZING AND SELECTION

According to
DIN 740 part 2

GENERAL INFORMATION

SAFETY COUPLINGS

ST

SAFETY COUPLINGS

RELIABLE TORQUE OVERLOAD PROTECTION

ST series safety couplings are designed to decouple machine drives in the event of torque overload, preventing damage and downtime.

A series of ball bearings are spring loaded into detents on an otherwise freely spinning output plate. In the case of the ST series, these ball bearings are mounted onto plungers which are individually loaded in order to generate high clutching forces while maintaining a relatively small profile.

The transmittable torque is determined by the number and force setting of the safety elements and their distance from the center of the rotational axis. In the event of an overload, the force applied by the detents causes the plungers to overcome the spring loading and retract into the housings, resulting in a complete separation of the driving and driven hubs.

They will not re-engage automatically. After the overload condition has passed, an axial force must be applied in order to re-engage the safety elements into the detents of the output plate.

The safety elements consist of two components: the detent receptacle and the adjustable plunger mechanism.

TORQUE ADJUSTMENT

After loosening (approx. 1 rotation) the locking screws (E₃), the adjustment nut can be turned to adjust the disengagement setting. Minimum, maximum and preset values are marked on the adjustment scale. After adjustment, the torque setting is secured by tightening the locking screws (E₃).

► **Note**

All safety elements must be set to the same value.

RE-ENGAGEMENT OF THE SAFETY ELEMENTS

After the overload has been cleared, the drive or driven side must be rotated until the re-engagement position markings are lined up. The elements can only be re-engaged in this position. The element is re-engaged through applying an axial force to the plunger. Re-engagement is audible. Once this is complete, the torque limiter is ready for operation.

MANUAL DISENGAGEMENT OF ELEMENTS

Prior to machine start-up, the individual elements can be manually disengaged. A manual disengagement tool is available from R+W (see page 61).

SAFETY COUPLINGS

SYMBOLS

T_{AR}	= Disengagement torque of the coupling (Nm)
K	= Service factor
T_{max}	= Maximum torque of the drive system (Nm)
T_{AN}	= Rated torque of the motor (Nm)
P_{Drive}	= Drive power (kW)
n	= Drive speed (min^{-1})
α	= Angular acceleration (rad/s^2)
t	= Acceleration time (s)
ω	= Angular velocity (rad/s)
J_L	= Moment of inertia of load (kgm^2)
J_A	= Moment of inertia of drive (kgm^2)
T_{AS}	= Peak motor torque (Nm)
S	= Number of safety elements
F	= Tangential force (kN)
r	= Radius to element (m)
s	= Spindle pitch (mm)
F_V	= Feed force (N)
η	= Spindle efficiency
d_0	= Pitch diameter (mm)
F_V	= Feed force (N)
C_T	= Torsional stiffness of coupling (Nm/rad)
$J_{Masch.}$	= Total load inertia (kgm^2) (e.g. shaft + sprocket + chain + roller + 1/2 of coupling)
$J_{Mot.}$	= Total driving inertia (kgm^2) (e.g. motor shaft + 1/2 of coupling)
f_e	= Resonant frequency of the two mass system (Hz)

Shock or Load Factor S_A		
uniform load	non-uniform load	heavy shock load
1	2	3
For many crushing and shredding applications load factors are commonly $S_A = 2-3$		

ACCORDING TO DISENGAGEMENT TORQUE

Safety couplings are normally selected according to the required disengagement torque, which must be greater than the maximum torque required for start-up and operation.

Disengagement torque values are often determined from the drive data and are typically a multiple of the nominal torque at the operating drive speed (T_{AN}). In addition to a start-up torque (T_{max}), the following values are used as further safety factors, depending on the load conditions:

- $K = 1.3$ uniform harmonious load
- $K = 1.5$ non-uniform load
- $K = 1.8$ heavy shock load

$$T_{AR} \geq K \cdot T_{max} \text{ (Nm)}$$

or

$$T_{AN} \geq 9,550 \cdot \frac{P_{Drive}}{n} \text{ (Nm)}$$

ACCORDING TO ACCELERATION
(START-UP WITH NO LOAD)

$$T_{AR} \cong \frac{J_L}{J_A + J_L} \cdot T_{As} \cdot S_A \cong \alpha \cdot J_L \text{ (Nm)}$$

$$\alpha = \frac{\omega}{n} = \frac{\pi \cdot n}{t \cdot 30}$$

ACCORDING TO ACCELERATION
(START-UP WITH LOAD)

$$T_{AR} \cong \left[\frac{J_L}{J_A + J_L} \cdot (T_{AS} - T_{AN}) + T_{AN} \right] \cdot S_A \cong \alpha \cdot J_L + T_{AN} \text{ (Nm)}$$

ACCORDING TO THE NUMBER
OF SAFETY ELEMENTS

$$T_{AR} = S \cdot F \cdot r$$

ACCORDING TO LINEAR FEED FORCE

Screw drive

$$T_{AN} = \frac{s \cdot F_v}{2,000 \cdot \pi \cdot \eta} \text{ (Nm)}$$

Rack and pinion drive

$$T_{AN} = \frac{d_0 \cdot F_v}{2,000} \text{ (Nm)}$$

ACCORDING TO RESONANT FREQUENCY

The torsional natural frequency of the coupling must be significantly higher or lower than that of the equipment. For the mechanical substitution model the two mass system applies.

$$f_e = \frac{1}{2 \cdot \pi} \sqrt{C_T \cdot \frac{J_{Masch} + J_{Mot}}{J_{Masch} \cdot J_{Mot}}} \text{ (Hz)}$$

¹⁾ P = power of drive in kW
n = speed of drive in rpm

DESIGN FACTORS

Shock or Load Factor S_A

Drive type	Load characteristics of driven machine		
	G	M	S
electric motors, turbines, hydraulic motors	1.25	1.6	2.0
internal combustion engines ≥ 4 cylinder degree of uniformity $\geq 1:100$	1.5	2.0	2.5

G = smooth uniform load | M = moderate load | S = heavy shock load

Temperature Factor S_v

Ambient Temperature	-40 C° +30 C°	+40 C°	+60 C°	+80 C°	> +80 C°
S_v	1.0	1.1	1.4	1.8	on request

Start Factor S_z

Starts per Hour	30	60	120	240	>240
S_z	1.0	1.1	1.2	1.3	on request

ACCORDING TO TORQUE

1. Calculate the drive torque T_{AN} .

$$T_{AN} \geq 9,550 \cdot \frac{P_{Drive}}{n} \quad (\text{Nm})$$

2. Base the coupling rated torque T_{KN} on the drive torque T_{AN} multiplied by the application factors.

$$T_{KN} \geq T_{AN} \cdot S_A \cdot S_v \cdot S_z$$

Example:

Coupling between an electric motor (P = 450 kW and n = 980 rpm) and a gearbox driving a belt conveyor for bulk materials.

$$T_{AN} = 9,550 \cdot \frac{450 \text{ kW}}{980 \text{ min}^{-1}} = 4,385.2 \text{ Nm}$$

smooth uniform load
= G : $S_A = 1.25$
ambient temperature
40°C : $S_v = 1.1$
starts
30/h : $S_z = 1.0$

$$T_{KN} \geq T_{AN} \cdot S_A \cdot S_v \cdot S_z$$

$$T_{KN} \geq 4,385.2 \text{ Nm} \cdot 1.25 \cdot 1.1 \cdot 1.0 = 6,029.7 \text{ Nm}$$

Selected coupling: ST2 / 10 with elastomer coupling $T_{KN} = 6,030 \text{ Nm}$

SIZING AND SELECTION

SAFETY COUPLINGS

ST

GEAR COUPLING DESIGN ST4

Size	ST4 / 2	ST4 / 5	ST4 / 10	ST4 / 25	ST4 / 40	ST4 / 60	ST4 / 100	ST4 / 160	ST4 / 250

ACCORDING TO TORQUE

1. Calculate the drive torque. T_{AN} .

$$T_{AN} \cong 9,550 \cdot \frac{P_{Drive}}{n} \quad (\text{Nm})$$

2. Base the coupling rated torque T_{KN} on the drive torque T_{AN} multiplied by the application factor. (see page 20 for shock or load factors S_A).

$$T_{KN} \geq T_{AN} \cdot S_A$$

Example:

Coupling between an electric motor (P = 800 kW and n = 980 rpm) and a gearbox driving a bucket chain excavator ($S_A = 2$).

$$T_{AN} = 9,550 \cdot \frac{800 \text{ kW}}{980 \text{ min.}^{-1}} = 7,796 \text{ Nm}$$

$$\begin{aligned} T_{KN} &\geq T_{AN} \cdot S_A \\ T_{KN} &\geq 7,796 \text{ Nm} \cdot 2 = 15,592 \text{ Nm} \end{aligned}$$

Selected coupling: ST4 / 10 with gear coupling $T_{KN} = 16,000 \text{ Nm}$

SIZING AND SELECTION

LP

DISC PACK COUPLINGS

SYMBOLS

- T_{KN} = Rated torque of the coupling (Nm)
 T_{AS} = Peak torque of the drive system
e.g. max. acceleration torque of drive (Nm)
or max. braking torque of load (Nm)
 J_L = Total load inertia (e.g. shaft + sprocket + chain + roller + 1/2 of coupling) (kgm²)
 J_A = Total driving inertia (motor [including gear ratio] + 1/2 of coupling) (kgm²)

Shock or Load Factor S_A		
uniform load	non-uniform load	highly dynamic load
1	2	3-4
Common factor for servo drives in machine tools: $S_A = 2-3$		

ACCORDING TO TORQUE

Couplings are normally sized for the highest torque to be regularly transmitted. The peak torque of the application should not exceed the rated torque of the coupling. The following calculation provides an approximation of the minimum required coupling size, and allows for the maximum rated speed and misalignment to exist in the application.

$$T_{KN} \cong 1.5 \cdot T_{AS} \text{ (Nm)}$$

ACCORDING TO ACCELERATION TORQUE

A more detailed calculation takes acceleration and the driving and driven moments of inertia into account. A strong inertia ratio diminishes the effect of the load factor in the sizing calculation.

$$T_{KN} \cong T_{AS} \cdot S_A \cdot \frac{J_L}{J_A + J_L} \text{ (Nm)}$$

GENERAL INFORMATION

GEAR COUPLING

BZ

GEAR COUPLING

FUNCTION OF THE GEAR COUPLING

The high precision gearing of the coupling compensates for lateral, angular, and axial misalignment. The gearing transmits torque with minimal backlash and a high degree

of torsional rigidity. The precise geometry of the gearing ensures the performance of the coupling.

Axial misalignment

Angular and lateral misalignment

MAINTENANCE AND LUBRICATION

► **Note:** Lubrication of the gearing is very important to the service life of the coupling. An additional seal (optional) ensures the lubrication of the gearing over a long period of time.

Use only high performance grease

RECOMMENDED LUBRICANTS

Normal speed		High speed	
Castrol	Impervia MDX	Caltex	Coupling Grease
Esso	Fibrax 370	Klüber	Klüberplex GE 11-680

¹⁾ P = power of drive in kW
n = speed of drive in rpm

ACCORDING TO TORQUE

1. Calculate the drive torque at speed T_{AN} .

$$T_{AN} \cong 9,550 \cdot \frac{P_{Drive}}{n} \text{ (Nm)}$$

2. Determine the required torque rating of the coupling T_{KN} based on the drive torque T_{AN} multiplied by the shock or load factor S_A (see page 20)

$$T_{KN} \geq T_{AN} \cdot S_A$$

Sample calculation:

Coupling between an electric motor (P = 800 kW at n = 980 rpm) and a transmission, driving a screw conveyor ($S_A = 1.6$).

$$T_{AN} = 9,550 \cdot \frac{800 \text{ kW}}{980 \text{ min.}^{-1}} = 7,796 \text{ Nm}$$

$$\begin{aligned} T_{KN} &\geq T_{AN} \cdot S_A \\ T_{KN} &\geq 7,796 \text{ Nm} \cdot 1.6 = 15,592 \text{ Nm} \end{aligned}$$

 C_T = Torsional stiffness of coupling (Nm/rad)
 f_e = Resonant frequency of the two mass system (Hz)
 f_{er} = Excitation frequency of the drive (Hz)
 φ = Angle of twist (degree)

Shock or Load Factor S_A		
uniform load	non-uniform load	heavy shock load
1	2	3-4
For many crushing and shredding applications load factors are commonly $S_A = 2-3$		

ACCORDING TO TORQUE

Couplings are normally sized for the highest torque to be regularly transmitted. The peak torque of the application should not exceed the rated torque of the coupling. The following calculation provides an approximation of the minimum required coupling size, and allows for the maximum rated speed and misalignment to exist in the application.

$$T_{KN} \cong 1.5 \cdot T_{AS} \text{ (Nm)}$$

ACCORDING TO ACCELERATION TORQUE

A more detailed calculation takes acceleration and the driving and driven moments of inertia into account. A strong inertia ratio diminishes the effect of the load factor in the sizing calculation.

$$T_{KN} \cong T_{AS} \cdot S_A \cdot \frac{J_L}{J_A + J_L} \text{ (Nm)}$$

ACCORDING TO RESONANT FREQUENCY

The torsional natural frequency of the coupling must be significantly higher or lower than that of the equipment. For the mechanical substitution model the two mass system applies.

In practice the following applies: $f_e \geq 2 \cdot f_{er}$

$$f_e = \frac{1}{2 \cdot \pi} \sqrt{C_T \cdot \frac{J_A + J_L}{J_A \cdot J_L}} \text{ (Hz)}$$

Two Mass System

ACCORDING TO TORSIONAL DEFLECTION

To calculate transmission error as a result of torsional stress:

$$\varphi = \frac{180}{\pi} \cdot \frac{T_{AS}}{C_T} \text{ (degree)}$$

SIZING AND SELECTION

ELASTIC JAW COUPLINGS

SYMBOLS

T_{KN}	= Rated torque of the coupling (Nm)
T_{Kmax}	= Maximum torque rating of coupling (Nm)
T_S	= Peak torque applied to the coupling (Nm)
T_{AS}	= Peak torque of the drive system (Nm)
T_{AN}	= Nominal torque of the drive system (Nm)
T_{LN}	= Nominal torque of the load (Nm)
P	= Drive power (kW)
n	= Rotational speed (min. ⁻¹)
J_A	= Total driving inertia (kgm ²) (motor [including gear ratio] + 1/2 of coupling)
J_L	= Total load inertia (kgm ²) (load + drive line components + half of coupling)
J_1	= Moment of inertia of driving coupling half (kgm ²)
J_2	= Moment of inertia of driving coupling half (kgm ²)
m	= Ratio of the moment of inertia of the drive to the load
\mathcal{U}	= Temperature at the coupling (also consider radiant heat)
S_v	= Temperature factor
S_A	= Load factor
S_z	= Start factor (factor for the number of starts per hour)
Z_h	= Number of starts per hour (1/h)

Temperature factor S_v	A	B	E
Temperature (v)	Sh 98 A	Sh 65 D	Sh 64 D
> -30°C to -10°C	1.5	1.3	1.2
> -10°C to +30°C	1.0	1.0	1.0

> +40°C to +60°C	1.4	1.3	1.2
> +60°C to +80°C	1.7	1.5	1.3
> +80°C to +100°C	2.0	1.8	1.6
> +100°C to +120°C	-	2.4	2.0
> +120°C to +150°C	-	-	2.8

Start factor S_z	A	B	E
Z_h	up to 120	120 to 240	over 240
S_z	1.0	1.3	on request

Shock / load factor S_A	A	B	E
uniform load		non-uniform load	heavy shock load
1		1.8	2.5

COUPLING SELECTION FOR OPERATION WITHOUT SHOCK OR REVERSAL

The rated torque of the coupling (T_{KN}) must be greater than the rated torque of the load (T_{LN}), taking into account the temperature at the coupling (Temperature factor S_v). Should T_{LN} be unknown, T_{AN} can be used as a substitute in the formula.

Calculation

$$T_{KN} > T_{AN} \cdot S_v$$

Supplemental Calculation

$$T_{AN} = \frac{9,550 \cdot P}{n}$$

Sample calculation: (without shock loads)

Coupling conditions

$$v = 70^\circ \text{C}$$

$$S_v = 1.7 \text{ (for } 70^\circ \text{ Elastomer Type A)}$$

Drive for centrifugal pump

$$T_{AN} = 850 \text{ Nm}$$

$$\text{Calculation: } T_{KN} > T_{AN} \cdot S_v$$

$$T_{KN} > 850 \text{ Nm} \cdot 1.7$$

$$T_{KN} > \underline{1445 \text{ Nm}}$$

—————> **Result:** Coupling model EKH/2500/A ($T_{KN} = 1950 \text{ Nm}$) is selected.

COUPLING SELECTION FOR OPERATION WITH SHOCK LOADS

Same basic conditions as above. In addition, the maximum torque rating of the coupling (T_{Kmax}) is dictated by peak torque (T_s) due to shock loads.

Calculation

$$T_{KN} > T_{AN} \cdot S_v$$

Calculation

$$T_{Kmax} > T_s \cdot S_z \cdot S_v$$

Supplemental Calculation

$$T_{AN} = \frac{9,550 \cdot P}{n}$$

Supplemental Calculation

$$T_s = \frac{T_{AS} \cdot S_A}{m + 1}$$

$$m = \frac{J_A \cdot J_1}{J_L \cdot J_2}$$

$$\Delta Kw_{\max} = 2^\circ$$

Axial misalignment ΔKa

ΔKa See table
(Page 27)

R+W CALCULATION PROGRAM

Using proprietary software, R+W will calculate the specific mechanical details of exactly the model you plan to use. Overall length, tube materials (e.g. steel, aluminum, CFK), and other factors are used to determine a number of performance values unique to your line shaft coupling.

Critical speed	$n_k = 1/\text{min.}$
Torsional stiffness of tubing	$C_T^{ZWR} = \text{Nm/rad}$
Overall stiffness	$C_T^{ZA} = \text{Nm/rad}$
Torsional deflection	$\varphi = \text{degree-min-sec}$
Total Weight	$m = \text{kg}$
Moment of inertia	$J = \text{kgm}^2$
Maximum misalignment	$\Delta Kr = \text{mm}$

GENERAL INFORMATION ELASTOMER SEGMENT ST2

ST2

ELASTIC SAFETY COUPLING

THE ELASTOMER SEGMENT

The compensating elements of the ST2 safety couplings are the elastomer segments. They transmit torque while damping vibration and compensating for lateral, axial

and angular misalignment. Three different versions are available with version A being supplied unless otherwise specified.

Type	Relative damping (ψ)	Temperature range constant	Temperature range peak	Material	Shore hardness	Features
A (Standard)	1.0	-40°C to +80°C	+90°C	Natural and synthetic rubber	75-80 Shore A	Very high wear resistance
B	1.0	-40°C to +100°C	+120°C	Synthetic rubber	73-78 Shore A	Resistant to many oils and fuels
C	1.0	-70°C to +120°C	+140°C	Silicone rubber	70-75 Shore A	High temperature range

► **Note**

Elastomer segments can be easily changed after installation. Every coupling utilizes 6x elastomer segments. The elastomer segments do not need to be installed prior to coupling mounting.

CHANGING THE ELASTOMER SEGMENTS

For easier handling, the coupling will be shipped unassembled.

INSTALLATION

SHAFT / AXIS MISALIGNMENT

Exact alignment of the shaft axes extends the service life of the coupling and adjacent components by minimizing reaction loads from misalignment.

INSTALLATION AND HANDLING INDUSTRIAL DRIVE COUPLINGS

INDIRECT DRIVES

SAFETY COUPLINGS

Drive attachments such as sprockets and universal joint shafts need to be centered on one of the precision locating features in the output flange of the coupling. In the case of sprockets, gears, sheaves, etc, the radial load should be centered between the two rows of ball bearings, integral to the coupling. In case this is not possible the overhung load can be supported by additional outboard bearings on the shaft. Make sure to observe the allowable size and radial load ratings for the safety couplings.

SAFETY COUPLINGS

Model ST safety couplings are designed for high torque. This is accomplished by means of the robust spring plunger safety elements, which are uniformly distributed around the face of the coupling body. These safety elements provide a spring loaded form fit connection between the input and output of the coupling system. Transmittable torque is determined by the quantity and force settings of the safety elements. At a predetermined maximum torque level, the balls of the safety elements exit the conical detents in the output flange of the coupling, and retract inside the housings of the safety elements. This creates a complete disconnection of the input and output of the coupling system. Re-engagement is performed by applying pressure to the back side of the safety elements, causing the balls to be released back into their detents. The coupling system is sealed to prevent dirt and debris from entering, and to prevent grease from escaping.

INSTALLATION AND HANDLING INDUSTRIAL DRIVE COUPLINGS

DIRECT DRIVES

DISC PACK COUPLINGS

R+W LP series couplings come with the disc packs fully assembled. They need only to be mounted to the hubs and spacers during installation. Once assembled the disc pack couplings compensate for axial, lateral, and angular shaft misalignment. Torque is transmitted across the disc packs purely by the frictional flanged connection created by the grade 12.9 bolts. This helps to avoid problems associated with backlash, stress concentration, and micro movements, while also making the coupling assembly more torsionally stiff.

ST2

WITH SIMPLE KEYWAY MOUNTING

200 - 25,000 Nm

NEW: ATEX

PROPERTIES

MATERIAL

- ▶ **Safety coupling portion:** hardened steel (nitrocarburized surface)
- ▶ **Elastomer segments:** precision molded, wear resistant rubber compound (75-80 Shore A)
- ▶ **Elastomer coupling:** hubs made from coated high strength cast steel

DESIGN

With keyway connection (spline profile on request). Elastomer segments compensate for misalignment and absorb vibration. Safety elements evenly spaced around the circumference. Field adjustable within the specified range.

ST4

WITH SIMPLE KEYWAY MOUNTING

200 - 25,000 Nm

PROPERTIES

MATERIAL

- ▶ **Safety coupling portion:** hardened steel (nitrocarburized surface)
- ▶ **Gear coupling portion:** wear resistant high strength alloy steel (nitrocarburized surface)

DESIGN

With keyway connection (spline profile on request). Gear coupling for misalignment compensation. Safety elements evenly spaced around the circumference. Field adjustable within the specified range.

OPTIONS / SPECIAL SOLUTIONS

SAFETY COUPLINGS - FURTHER POSSIBILITIES

FOR EXTRUDER APPLICATIONS

- ▶ with elastic jaw coupling
- ▶ precise overload protection
- ▶ removable center section for lateral mounting

WITH TORSIONALLY STIFF DISC PACK COUPLING

- ▶ single or double flex
- ▶ high torsional stiffness
- ▶ disc packs from highly elastic spring steel

WITH TORSIONALLY STIFF BELLOWS COUPLING

- ▶ with clamping hubs, keyway mounting or flange mounting
- ▶ compensation for misalignment
- ▶ bellows made from highly elastic stainless steel

FOR HIGH SPEED APPLICATIONS

- ▶ integral ball-plunger system
- ▶ extremely compact with a low moment of inertia
- ▶ balanced for high speed

BUREAU VERITAS CERTIFIED

- ▶ for inland and offshore applications
- ▶ customized solutions
- ▶ rugged and special design for direct use in ship powertrains

MORE DESIGNS AVAILABLE

- ▶ for 1,000,000 Nm and more
- ▶ customer specified solutions
- ▶ for all branches and industries

TORQSET® SAFETY COUPLINGS ACCESSORIES

ST

SAFETY ELEMENT

PROPERTIES

MATERIAL

Hardened steel (nitrocarburized surface)

DESIGN

Two part assembly for installation into prefabricated coupling components.

Part 1: detent receptacle

Part 2: self-contained, spring loaded plunger module.

The spring force setting is adjustable in the field, with the settings clearly marked on an adjustment scale.

FIT TOLERANCE

For insertion of the safety elements H7 precision holes should be used for all centered components.

RE-ENGAGEMENT

When properly located over the detent receptacle the safety element can be re-engaged through the application of pressure to the back side of the plunger core.

Design:

TORSIONALLY STIFF DISC PACK COUPLINGS

350 – 24,000 Nm

GENERAL INFORMATION ABOUT R+W DISC PACK COUPLINGS:

SERVICE LIFE

R+W disc pack couplings are fatigue resistant and wear free for an infinite service life, as long as the technical limits are not exceeded.

FIT CLEARANCE

Overall shaft / hub clearance of 0.01 - 0.05 mm

TEMPERATURE RANGE

-30 to +280° C

ROTATIONAL SPEED

see table

DELIVERY

LP couplings are delivered with the disc packs pre-assembled. They need only to be mounted to the hubs.

ATEX (Optional)

For use in hazardous areas available upon request.

LP		Options / Special Solutions	Page 77

DESIGN

DISC PACK COUPLINGS

R+W disc pack couplings transmit torque across the disc pack assemblies purely by friction, thus avoiding stress concentration, backlash, and micro-movements resulting from transmitting torque across shoulder bolts. This aids in approaching infinite life in addition to making the complete coupling assembly more torsionally stiff.

R+W disc pack couplings are shipped as individual components. Assembly is required.

MISALIGNMENT COMPENSATION

$$\Delta K_{total} = \Delta K_r + \Delta K_w + \Delta K_a \leq 100\%$$

These couplings compensate for varying combinations of shaft misalignment types as percentages of the total allowable misalignment values listed in the data tables. The total sum of the three misalignment percentages must not exceed 100%.

Example: pump skid

- axial misalignment: 20%
- lateral misalignment: 40%
- angular misalignment: 40%

$$\Delta K_{total} = 20\% + 40\% + 40\% \leq 100\%$$

➔ coupling is fatigue resistant

LP1

WITH KEYWAY MOUNTING

350 - 5,000 Nm

PROPERTIES

FEATURES

- ▶ very high torsional stiffness
- ▶ single flex design
- ▶ wear and maintenance free

MATERIAL

- ▶ **Disc pack:** highly elastic spring steel
- ▶ **Hubs:** high strength steel

DESIGN

Two precision machined coupling hubs mounted to the disc pack by means of high strength screws and bushings for alignment and frictional clamping of the assembly.

Axial retention of the hubs with DIN 916 set screws

- ▶ high torsional stiffness
- ▶ double flex design
- ▶ customer specified length available

MATERIAL

- ▶ **Disc packs:** highly elastic spring steel
- ▶ **Hubs and spacer:** high strength steel

DESIGN

Two precision machined coupling hubs and precision spacer tube mounted to the disc packs by means of high strength screws and bushings for alignment and frictional clamping of the assembly. Axial retention with DIN 916 set screws.

DISC PACK COUPLINGS
LP

WITH KEYWAY MOUNTING

500 - 24,000 Nm

API 610 - METRIC
(API 671 OPTIONAL)

PROPERTIES

FEATURES

- ▶ lateral mounting without moving hubs
- ▶ integral safety catch in case of disc pack rupture
- ▶ balanced in accordance with ANSI / AGMA 9000 class 9

MATERIAL

- ▶ **Disc packs:** highly elastic, corrosion resistant spring steel

▶ **Hubs and spacer:** high strength steel

DESIGN

Two precision machined coupling hubs and precision spacer tube mounted to the disc packs by means of high strength screws and bushings for alignment and frictional clamping of the assembly. Axial retention with DIN 916 set screws (interference fit on request).

DISC PACK COUPLINGS LP

LP3

WITH CONICAL CLAMPING RING

500 - 24,000 Nm

PROPERTIES

FEATURES

- ▶ high torsional stiffness
- ▶ high clamping pressure
- ▶ backlash free torque transmission
- ▶ good for high speed, reversing and intermittent loading

DESIGN

Two precision machined conical clamping ring hubs and precision spacer tube mounted to the disc packs by means of high strength screws and bushings for alignment and frictional clamping of the assembly.

MATERIAL

- ▶ **Disc packs:** highly elastic spring steel
- ▶ **Hubs and spacer:** high strength steel

TORSIONALLY STIFF DISC PACK COUPLINGS - FURTHER POSSIBILITIES

WITH CONICAL CLAMPING RING HUBS AND FLANGE MOUNTING FOR TORQUE TRANSDUCERS

- ▶ high torsional stiffness
- ▶ high clamping pressure
- ▶ backlash free precision torque transmission

WITH FULLY SPLIT CLAMPING HUBS

- ▶ simple lateral installation and removal
- ▶ backlash free precision torque transmission
- ▶ single or double flex

WITH SINGLE SPLIT CLAMPING HUBS

- ▶ easy to mount
- ▶ backlash free precision torque transmission
- ▶ optional keyway
- ▶ single or double flex

WITH ELECTRICAL ISOLATION

- ▶ with keyed connection, conical clamping ring hub, clamping hub, or flange connection
- ▶ single flex, double flex, or rigid

CROWNED GEAR COUPLINGS

1,900 – 2,080,000 Nm

GENERAL INFORMATION ABOUT R+W CROWNED GEAR COUPLINGS:

FIT CLEARANCE

Overall shaft / hub clearance of 0.01 - 0.05 mm

TEMPERATURE RANGE

-30 to +100° C; higher temperatures on request

CROWNED GEAR COUPLINGS

BZ		Options / Special Solutions	Page 86

GENERAL INFORMATION

CROWNED GEAR COUPLINGS

FUNCTION OF THE GEAR COUPLING

The precise integration of the coupling hub and intermediate flange allow for low backlash and highly rigid torque transmission, while compensating for lateral, axial and

angular shaft misalignment. The crowned geometry of the gearing allows for a long life, even without the presence of misalignment.

Axial misalignment

Angular and lateral misalignment

APPROVED LUBRICANTS

► **Note:** Proper lubrication is very important to the service life of the coupling. An optional additional seal may be included in order to extend lubrication intervals.

High performance grease is recommended.

BZ1

WITH KEYWAY MOUNTING

290,000 – 2,080,000 Nm

NEW

PROPERTIES

MATERIAL

Coupling from high strength steel

DESIGN

Hubs with keyway mounting or high precision cylindrical bore for interference fitting.
Optional DIN 916 set screw for locking down onto shaft key.

CROWNED GEAR
COUPLINGS BZ

FLEXIBLE GEAR COUPLINGS - FURTHER POSSIBILITIES

WITH EXTENDED HUB ON ONE OR BOTH ENDS

- ▶ Hub length is customizable
- ▶ Easy replacement of existing gear couplings
- ▶ Optimal utilization of available space

WITH BRAKE DISC

- ▶ custom dimensions available
- ▶ use for holding or emergency stopping

WITH REVERSED HUB ON ONE OR BOTH ENDS

- ▶ for minor increases in the distance between shaft ends
- ▶ optimized torque transfer with best shaft engagement
- ▶ longer life

BACKLASH FREE, TORSIONALLY STIFF METALLIC BELLOWS COUPLINGS 10,000- 100,000 Nm

GENERAL INFORMATION ABOUT R+W BELLOWS COUPLINGS:

SERVICE LIFE

R+W bellows couplings are fatigue resistant and wear free for an infinite service life, as long as the technical limits are not exceeded.

FIT CLEARANCE

Overall shaft / hub clearance of 0.03 - 0.08 mm

TEMPERATURE RANGE

-40 to +300° C

SPECIAL SOLUTIONS

Various materials, tolerances, dimensions and performance ratings available for custom applications on request.

ATEX (Optional)

For use in hazardous areas available upon request.

TORSIONALLY STIFF METALLIC BELLOWS COUPLINGS 10,000 – 100,000 Nm

MODEL		FEATURES	
BX1		with flange mounting from 10,000 - 100,000 Nm ▶ for customer specific applications	Page 91
BX4		with simple keyway mounting from 10,000 - 100,000 Nm ▶ low backlash keyway connection ▶ compact, simple design	Page 92
BX6		with conical clamping ring from 10,000 - 100,000 Nm ▶ backlash free conical clamping ▶ high shaft clamping pressure	Page 93

BX1

WITH FLANGE MOUNTING

10,000 - 100,000 Nm

PROPERTIES

FEATURES

- ▶ compact, simple design
- ▶ high misalignment compensation
- ▶ integral support system (size 25 and up)

MATERIAL

- ▶ **Hubs:** steel
- ▶ **Bellows:** highly flexible high grade stainless steel

DESIGN

Both ends with flanged hubs
 Spacer between bellows
 (optional variable length)
 (size 10 without spacer)
 welded bellows-hub connection

BACKLASH FREE SERVOMAX[®] ELASTIC JAW COUPLINGS 1,950 – 25,000 Nm

GENERAL INFORMATION ABOUT R+W ELASTOMER COUPLINGS:

SERVICE LIFE

When properly selected, handled, and installed, these couplings are maintenance free with infinite service life.

ATEX (Optional)

For use in hazardous areas available upon request.

SPECIAL SOLUTIONS

Various materials, tolerances, dimensions and performance ratings available for custom applications on request.

FIT CLEARANCE

Overall shaft / hub clearance of 0.01 - 0.05 mm

BACKLASH FREE SERVOMAX® ELASTIC JAW COUPLINGS 1,950 – 25,000 Nm

MODEL		FEATURES	
EK1		with simple keyway mounting from 1,950 - 25,000 Nm <ul style="list-style-type: none">▶ economically priced version▶ modifiable to customer specific dimensions and features	Page 98
EKH		with fully split clamping hubs from 1,950 - 25,000 Nm <ul style="list-style-type: none">▶ easy installation and removal▶ allows for lateral mounting	Page 99
EK6		with conical clamping ring from 1,950 - 25,000 Nm <ul style="list-style-type: none">▶ highly concentric design▶ high clamping pressure on shafts▶ hubs mount axially▶ in case a housing will be used, no access holes are necessary	Page 100
EZ2		with fully split clamping hubs from 1,950 - 25,000 Nm <ul style="list-style-type: none">▶ standard lengths of up to 4 meters▶ no intermediate support bearing necessary▶ lateral installation and removal without disturbing adjacent equipment	Page 101

GENERAL INFORMATION

R+W ELASTIC JAW COUPLINGS

SHAFT MISALIGNMENT

FUNCTION

The equalizing element of the EK coupling is the elastomer insert. It transmits torque without backlash or vibration. The elastomer insert defines the characteristics of the entire drive system.

Backlash is eliminated by the press fit of the elastomer into the hubs. Through variation of the Shore hardness of the elastomer insert, the coupling system can be optimized for the ideal torsional characteristics.

SIZE 2500 - 9500

THE COUPLING INCLUDES 5X ELASTOMER SEGMENTS

Shore hardness 98 Sh A

Shore hardness 64 Sh D

Shore hardness 64 Sh D

DESCRIPTION OF THE ELASTOMER TYPES

Type	Shore hardness	Color	Material	Relative damping (μ)	Temperature range	Features
A	98 Sh A	red	TPU	0.4 - 0.5	-30°C to +100°C	high damping
B	64 Sh D	green	TPU	0.3 - 0.45	-30°C to +120°C	high torsional stiffness
E	64 Sh D	beige	Hytrel	0.3 - 0.45	-50°C to +150°C	temperature resistant

The values of relative damping were determined at 10 Hz and +20° C.

SIZES EK

SIZE		2500		4500		9500	
Type (elastomer insert)		A	B	A	B	A	B

EK1

WITH KEYWAY MOUNTING

1,950 - 25,000 Nm

PROPERTIES

FEATURES

- ▶ press fit design
- ▶ readily modified for custom dimensions
- ▶ low backlash (keyway)

MATERIAL

- ▶ **Hubs:** GGG40
- ▶ **Elastomer:** wear resistant thermally stable TPU

DESIGN

Two concentrically machined hubs with curved jaws, keyways, and set screws. 5x elastomer segments press fit for zero backlash; standard versions are electrically isolating.

MODEL EK1 | SIZE 2500 - 9500

SIZE		2500		4500		9500	
Type (Elastomer insert)		A	B	A	B	A	B
Rated torque (Nm)	T_{KN}	1950	2450	5000	6200	10000	12500

Mounting length (mm)	C	88		113		142	
Inside diameter (pilot bored) (mm)	D _v	30		40		50	
Inside diameter range H7 (mm)	D _{1/2}	30 - 95		40 - 130		50 - 170	
Inside diameter of elastomer (mm)	D _e	80		111		145	
Set screws (DIN 916)	E	see table (depending on bore ϕ)**					
Distance (mm)	G	25		30		40	
Possible shortening length (mm)	H	69		89		110	
Moment of inertia per hub (10 ⁻³ kgm ²)	J ₁ /J ₂	40		147		480	
Approx. weight (kg)		12,5		25		53	
Speed standard (min ⁻¹)		3,500		3,000		2,000	
Speed balanced (10 ³ min ⁻¹)		10	10	8	8	6,5	6,5

For information on shaft misalignment, torsional stiffness, and other details about the elastomer inserts see page 97.

** Set screw	ORDERING EXAMPLE	EK1	2500	A	50.8	80	XX
ϕ 12.1 - 30 M5	Model	●					Special designation only (e.g. special bore tolerance).
ϕ 30.1 - 58 M8	Size		●				
ϕ 58.1 - 95 M10	Elastomer insert type			●			
ϕ 95.1 - 130 M12	Bore D1 H7				●		
ϕ 130.1 - 170 M16	Bore D2 H7					●	
For custom features place an XX at the end of the part number and describe the special requirements (e.g. EK1 / 2500 / A / 50.8 / 80 / XX; XX = stainless steel)							

WITH FULLY SPLIT CLAMPING HUB 1,950 - 25,000 Nm

PROPERTIES

FEATURES

- ▶ lateral mounting
- ▶ easy installation and removal
- ▶ allows for pre-alignment of shafts

MATERIAL

- ▶ **Hubs:** GGG40
- ▶ **Elastomer:** wear resistant thermally stable TPU

DESIGN

Two concentrically machined, fully split hubs with curved jaws and clamping screws. 5x elastomer segments press fit for zero backlash; standard versions are electrically isolating.

ORDERING EXAMPLE
see page 98

elastomer insert type A / B

MODEL EKH | SIZE 2500 - 9500

SIZE			2500		4500		9500	
Type (Elastomer insert)			A	B	A	B	A	B
Rated torque (Nm)	T_{KN}		1950	2450	5000	6200	10000	12500
Max. torque* (Nm)	T_{Kmax}		3900	4900	10000	12400	20000	25000

Higher torques possible with keyway.

EK6

WITH CONICAL CLAMPING RING

1,950 - 25,000 Nm

PROPERTIES

FEATURES

- ▶ high clamping pressure
- ▶ self centering on shaft
- ▶ very high concentricity

MATERIAL

- ▶ **Hubs:** GGG40
- ▶ **Elastomer:** wear resistant thermally stable TPU

DESIGN

Two concentrically machined hubs with curved jaws and conical clamping rings. 5x elastomer segments press fit for zero backlash; standard versions are electrically isolating.

MODEL EK6 | SIZE 2500 - 9500

SIZE		2500		4500		9500	
Type (Elastomer insert)		A	B	A	B	A	B
Rated torque (Nm)	T_{KN}	1950	2450	5000	6200	10000	12500

Speed balanced (10^3 min^{-1})		10	10	8	8	6.5	6.5

For information on shaft misalignment, torsional stiffness, and other details about the elastomer inserts see page 97.

ORDERING EXAMPLE	EK6 / EKH	2500	A	50.8	80	XX
Model	●					Special designation only (e.g. special bore tolerance).
Size		●				
Elastomer insert type			●			
Bore D1 H7				●		
Bore D2 H7					●	

For custom features place an XX at the end of the part number and describe the special requirements (e.g. EK6 / 2500 / A / 50.8 / 80 / XX; XX = stainless steel)

EZ2

WITH FULLY SPLIT CLAMPING HUB

1,950 - 25,000 Nm

PROPERTIES

FEATURES

- ▶ easy installation and removal
- ▶ standard lengths up to 4 meters
- ▶ no intermediate support bearings required

MATERIAL

- ▶ **Hubs:** GGG40
- ▶ **Intermediate tube:** steel, optional CFK tube on request
- ▶ **Elastomer insert:** wear resistant, thermally stable TPU

DESIGN

Two fully split clamping hubs with concave driving jaws and four clamping screws. Both coupling bodies are firmly connected to a highly straight and laterally stiff intermediate tube. Elastomer consists of five separate segments. The elastomer insert makes the coupling axially mountable, backlash free, and electrically isolating.

MODEL EZ2 | SIZE 2500 - 9500

SIZE	2500		4500		9500	
	A	B	A	B	A	B

ELASTOMER COUPLINGS
EK

ATEX

**FOR USE IN
HAZARDOUS AREAS**

FOR USE IN HAZARDOUS AREAS INDUSTRIAL DRIVE COUPLINGS

MARKING EXAMPLE

Based on the ATEX markings the product can be certified for suitability under certain conditions.

	II	2G	c	IIA T6	X
	II	2D	c	85°C	X
	Equipment group	Category	Protection type	Explosion group / temperature class / maximum surface temperature	Additional features

Equipment group	Approval type
I	approved for underground operation
II	approved for all other applications

Category	Approved for zone	Zone description
1G	0	Area in which an explosive atmosphere consisting of a mixture of air and flammable gases, vapors, or mists, is present continuously, frequently, or for long periods of time.
2G	1	Area in which the potential exists for an explosive mixture of air and flammable gases, vapors, or mists to occur.
3G	2	Area in which the potential for an explosive mixture of air and flammable gases, vapors, or mists to occur is unlikely and only for a brief duration.
1D	20	Area with the same conditions as zone 0, with powder or dust.
2D	21	Area with the same conditions as zone 1, with powder or dust.
3D	22	Area with the same conditions as zone 2, with powder or dust.

Protection type	Definition
c	Design safety level: ignition hazard is avoided by the product design.

Example classification by occurring gases, mists and vapors according to temperature class and explosion group

Explosion group / temperature class / maximum surface temperature	IIA	IIB (includes IIA)	IIC (includes IIA + IIB)
T1 / 450°C	acetone, ammonia, methane...	natural gas	hydrogen
T2 / 300°C	ethyl alcohol, butane, cyclohexane...	ethylene, ethylene oxide	ethyne (acetylene)
T3 / 200°C	gasoline, diesel fuel, fuel oil...	ethylene glycol, hydrogen sulfide	
T4 / 135°C	acetaldehyde	ethyl ether	
T5 / 100°C			
T6 / 85°C			carbon disulphide

Additional labeling	Definition
X	Special operating conditions
U	Product is only a component in a machine. Conformity therefore shall only be declared after installation.

GENERAL INFORMATION

The use of devices and components in explosive areas is governed by the European directives 94/9/EC (for manufacturers) and 1992/92/EC (for operators). The presented products are non-electrical equipment of category 2.

According to Directive 94/9/EC, delivery of an ATEX coupling requires the inclusion of special installation and operating instructions along with the EC declaration of conformity issued by the manufacturer. All necessary values for installation, operation and removal are included.

All models of BX, LP, EK, and ST are available with ATEX certification on request. The BZ coupling is not intended for use in hazardous areas.

R+W Couplings are ATEX approved for use in general industry (Group II). Operation in hazardous zones 1 and 2 (Category 2G) and 21 and 22 (category 2D) are allowed. For the device group I, as well as for zones 0 and 20 the couplings are not registered.

Product specific information about ATEX certified couplings, such as temperature class, are available on request.

All statements made about ATEX conforming products are based on our present knowledge and experience. R+W reserves the right to change technical specifications.
